

Computer Network Solutions

- Providing engineering consultations and designing wired and wireless networks.
- Network installation including making paths and cables and coordinating racks
- Programming network devices such as routers and switches
- Maintenance of existing networks.
- Facilitating effective data sharing between users.
- Protecting the network with a firewall (hardware - software).
- System evaluation

Comprehensive evaluation of the organization's technological environment and identifying the network's strengths and weaknesses. Three Axis provides specific and explicit recommendations and develops a map to help you

- Note: Three Axis makes the first evaluation visit free of charge.
