

## Smart homes, villas, offices and home automation system

Home automation:.. It is the connection of various electrical and electronic devices and systems in the home together so that they can all be controlled from anywhere, and the required interaction between them to make the home smart, which works to save energy and ease of use for all home appliances

Smart systems can control the scheduling and automatic operation of each of the following systems:

- Water sprinkler system.
- Heating and air conditioning systems.
- Security and safety systems..
- Music.
- Energy saving.
- Food preparation devices.
- Remote control by short means.
