

A specialized system for controlling, monitoring, supervising and auditing vehicle management in ministries, government agencies and the public sector.

This system is divided into:

1 - Vehicle definition (Vehicle Management):- Definition of each vehicle in the ministry starting from the date of purchase and supplier data

and licenses and insurances and all basic data for the car (vehicle), as well as analyzing all approved data related to the vehicle such as fuel consumption rate, dates and meter readings in which periodic maintenance is evaluated and organizing the requirements of the various departments, as well as setting administrative and structural policies for all work related to control and supervision to facilitate making decisions related to cost and displaying reports on the results of the analyses.

2- Maintenance Department: Recording all work carried out by the Maintenance Department for the Ministry's private vehicles of all types of maintenance (periodic maintenance, emergency maintenance or service) whether inside the facility's workshop or through an external workshop (agency). 3- Voucher Follow-up Department: Receiving voucher books for fuel and oils for cooperatives, and following up on their disbursement according to the standards of disbursement for cars according to the regulations set for disbursement according to the nature of the vehicle's allocations
